

Surgutneftgas

The key areas of our company's activity are:

- hydrocarbon exploration and production,
- gas processing and power generation,
- manufacturing and marketing oil and gas products, and by-products of natural gas processing,
- petrochemical products manufacturing.

Company history

'Surgutneftegas', a company producing and exploring oil and gas, is one of Russian oil majors. It accounts for about 13% of the country's oil production, and 25% of gas produced by oil companies in Russia.

The company has been a leader in searching for oil and gas seams, exploring boreholes, and activating new extraction beds.

The Kirishinefteorgsintez refinery is one of the biggest refineries in the country, and it constitutes about 9% of oil processing in Russia.

The LAB-LABS plant which opened in 1996, produces 95% biodegradable detergents. This feedstock is used to produce 100% synthetic detergents in Russia, and 10% in Europe.

At present, Kirishi is implementing a construction project for the Deep Oil Refining Complex, which is second to none in Russia.

As a vertically integrated company, OAO Surgutneftegas has operated for only 15 years, yet companies that have become its subsidiaries in the process of privatization of Russia's crude complex, have quite a rich history: over 45 years of experience in oil production, 43 years of experience in oil refining, from 50 to 100 years of experience in the sector of petroleum derivative products.

History of introducing BUZIL detergents

The history of cooperation between Vicont Service and OAO Surgutneftegas goes back to 2009, when, at the most important cleaning fair in Moscow, our employees met the representatives of the organization from Surgut that was responsible for supplying main Surgutneftegas commercial facilities. It was then when the decision on cooperation was made.

In 2010 Vicont specialists carried out numerous analyses and practical test on Buzil chemical products in office areas. As a result, the management of the department responsible for purchasing household appliances, chemical products and cleaning equipment, decided to introduce Buzil chemical products to the tender specification. Vicont Service managed to win the aforementioned tender then and it started supplying their facilities with Buzil products.

The main areas where Buzil products are used are offices with floorings made of gres and PVC-Linoleum. Because of that, what turned out to be the best solution, were the Erol system, and **G235** for everyday cleaning, and **G430** for intensive cleaning.

G507 is successfully used for metal surfaces (including metal elements).

For daily toilet cleaning in Surgutneftegas, **G452** is used.

The opinion expressed by our partners makes us believe that they are satisfied with the Buzil detergents that they use. Moreover, what is worth mentioning is the level of service provided for our company. Several trainings have been run for department managers and line employees. Next year, another tender for detergents is to be invited, and we sincerely hope for a significant increase in purchase thanks to introducing Buzil detergents in our partners' new facilities.
