

BUZIL ALL-ROUND SERVICE
Help for your
CLP conversion

NEW LABELLING IN ACCORDANCE WITH GHS/ CLP – TRIED-AND-TRUSTED BUZIL QUALITY FOR ALL FIELDS OF APPLICATION!

The GHS (Globally Harmonised System) was created to provide a standardised global system for classification and labelling of chemical substances and mixtures such as cleaning agents. This is being implemented through the CLP Directive (Classification, Labelling and Packaging) in Europe. To ensure safe handling of the products, users need to be aware of potential hazards.

Important for your CLP conversion!

To integrate the newly labelled products in your company, you do not have to take anything into consideration that you have not provided before. In other words, for products with a CLP labelling obligation, you have to keep the corresponding safety documents for your Buzil product portfolio on hand and carry out hazardous substances training for your employees.

We are happy to support you with this.

The Buzil all-round service for your CLP conversion

The following information is available on our website or on request from your sales representative or at Buzil Customer Services:

- Individual hazardous substances training
- Templates for operating instructions in Germany
- Templates for hazardous substances register
- Comparison of old/new labelling incl. hazardous goods classification and storage classes
- FAQ – list of questions with all the important information
- Safety data sheets
- Technical data sheets

Please find all documents at www.buzil.com/en/downloads and the individual product pages.

PERFECTLY CLEAN - FOR SURE

OUR RECOMMENDATION FOR YOUR DAILY CLEANING!

Are there any changes in the Buzil products?

Buzil product performance is key for customer satisfaction. We have decided not to change the formulation of our products in order to avoid classification of hazardous substance. You get exactly the same quality and performance as before.

Customer safety is our major focus during this conversion. Due to the significantly more stringent criteria, there is a certain number of products with new classification. This results in the following picture of our current product range:

- 43 products remain non hazardous substances
- 18 products have new classification which is equivalent to previous classification and hazard symbol
- 23 products, which were classified as non-hazardous substances before, have now the new hazard symbol "irritant" (exclamation mark)
- 5 products, which were classified as non-hazardous substances before, have now new hazard symbol "corrosive"
- 14 products, which were classified "irritant" before, have now new hazard symbol "corrosive"

If you prefer to work exclusively with non-hazardous products, we also have the right solution for you.

Please find further non-hazardous daily cleaning products on our overview „old/new labelling“ at the download section of our website.
