Tips & Tricks: Sanitary Cleaning

The term sanitary cleaning is used for the cleaning of different rooms such as toilets, bathrooms, changing rooms, showers and wash rooms. The furniture and equipment inside these rooms is as varied as the rooms themselves. Toilet bowls, urinals, partition walls, tiles, taps and other fittings, wash basins, benches, lockers, cupboards and accessories in a wide range of materials present new challenges day by day.

In addition to largely acid-resistant materials such as stoneware tiles, ceramic, granite etc., there are also a large number of materials involved which are sensitive to acid, such as marble, terrazzo, grouting materials and coloured plastic parts. Suitable cleaning agents and methods for the sanitary area must take the different materials into account, as well as the type and degree of soiling and the water hardness.

The neutral sanitary fragrant cleaner Bucal G 468 or the alkaline sanitary cleaner Buz® Alkasan G 469 are suitable for materials sensitive to acid for example. Suitable cleaning agents and methods for the sanitary area must take the different materials into account, as well as the type and degree of soiling and the water hardness. The neutral sanitary fragrant cleaner Bucal G 468 or the alkaline sanitary cleaner Buz®

Alkasan G 469 are suitable for materials sensitive to acid for example. Buz® Alkasan stands out as a cleaning agent for routine, intensive and basic cleaning of sanitary areas thanks to its high grease, oil and soap solvent action.

Sanitary routine cleaning agents on the basis of amido sulphonic acids can be used for hard water and acid-resistant materials. Tried-and-trusted products with different fragrances are Bucasan® Trendy T 464 and Bucasan® Pino T 465. The water – repellent of these cleaning agents results in a streak-free shine without additional drying being necessary.

The products Planta® San P 312 routine cleaner and Planta® San Intense P 319 intensive cleaner are excellently suitable for the ecological cleaning of sanitary areas. Both products bear the EU Ecolabel and the Austrian environment label and fulfil maximum requirements in terms of cleaning effect and environmental protection.

Even the toughest of stains and scale marks are removed by the viscous sanitary basic cleaning agents Bucalex® G 460 and Wc Cleaner G 465 and the liquid cleaner Buz® Contracalc. Our Service team will be glad to help with advice on the right products to use in other special cases.
