FLOOR COVERINGS IN SUPERMARKETS

In the supermarket sector, as well as calcareous and non-calcareous artificial stone coatings, we primarily find stoneware or porcelain stoneware coatings. The latter are micro-porous, fine-rough, sometimes glossy stoneware tiles.

CLEANING

DEEP CLEANING OF NON-CALCAREOUS ARTIFICIAL STONE COATINGS AND PORCELAIN STONWARE COATINGS

	Dirt	Treatment	Cleaning device
Pick up loose dirt and remove any mortar, plaster residue and colour stains manually using a scraper.	LIME DEPOSITS in areas with high water hardness, in wet areas and after renovations can be removed using Erolcid® G 491.	Pre-wet the floor covering (important for protecting the cement joints!), and apply the cleaning solution.	
		Deep clean using a single-disc machine and a microfibre, active fibre, or melamine resin pad.	
		Pick up the loosened dirt using a wet vacuum cleaner, and rinse with water.	
	ORGANIC/INORGANIC DIRT e.g. heavy oil, grease and protein deposits can be removed using Erol® G 490.	Apply the cleaning solution evenly over the floor, and leave it to work for approximately 10 to 15 minutes.	
		Deep clean the covering using a single-disc machine and a microfibre, active fibre or melamine resin pad, or using a cleaning machine with contra-rotating brushes.	
		Pick up the loosened dirt using a wet vacuum cleaner, and rinse with water.

DAILY ROUTINE CLEANING

	Dirt	Treatment	Cleaning device
Microfibre cloths or pads must always be used in order to achieve a satisfactory cleaning result.	ORGANIC/INORGANIC DIRT e.g. protein, oil and grease or food debris e.g. coffee, red wine, etc.	The Erol® G 490 alkaline intensive cleaner is particularly well-suited to daily routine cleaning in supermarkets.	
	BUILD-UP OF LIME FILM	Regular use of acidic, surfactant-free cleaner O Tens Azid G 501 prevents the build-up of lime film. PLEASE NOTE: Alternating use of Erol® G 490 and O Tens Azid G 501 for cleaning will provide comprehensive protection against embedded dirt. In turn, this will successfully delay the need for cost-intensive deep or intensive cleaning.	

CARE

INITIAL TREATMENT

Stoneware and porcelain stoneware tiles cannot be coated, impregnated or subject to initial treatment without impairing their slip resistance and appearance.
