## CONCRETE STONE FLOORS THAT DO NOT CONTAIN LIME: „OBJECTSTONE“

Concrete stone does not contain lime and is based on quartzite, hard-stone gravels (e.g. granite), and colour pigments, with a two-component polyester resin as a binding agent. Stones, shells, glass or lapis lazuli are also additionally worked in. The chemical sensitivity of the stone depends on these additives. The surface of the stone is sensitive to mechanical abrasion and soap-based cleaners (e.g. Buz® Soap G 240).
